

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	18 June 2026
Team ID	
Project Name	ShopEZ
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

 10 minutes to prepare
 1 hour to collaborate
 2-8 people recommended

 **Before you collaborate**

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

 10 minutes

A Team gathering
Define who should participate in the session and send an invite. Share relevant information or pre-work ahead.

B Set the goal
Think about the problem you'll be focusing on solving in the brainstorming session.

C Learn how to use the facilitation tools
Use the Facilitation Superpowers to run a happy and productive session.

1 Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

 5 minutes

PROBLEM

How might we [your problem statement]?

Key rules of brainstorming

To run a smooth and productive session

 Stay in topic.

 Encourage wild ideas.

 Defer judgment.

 Listen to others.

 Go for volume.

 If possible, be visual.

Step-2: Brainstorm, Idea Listing and Grouping

2

Brainstorm

Write down any ideas that come to mind that address your problem statement.

10 minutes

TIP

You can select a sticky note and hit the pencil (switch to select) icon to start drawing!

3

Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. In the last 10 minutes, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

20 minutes

TIP

Add customizable tags to sticky notes to make it easier to find, browse, organize, and categorize important ideas as themes within your mind.

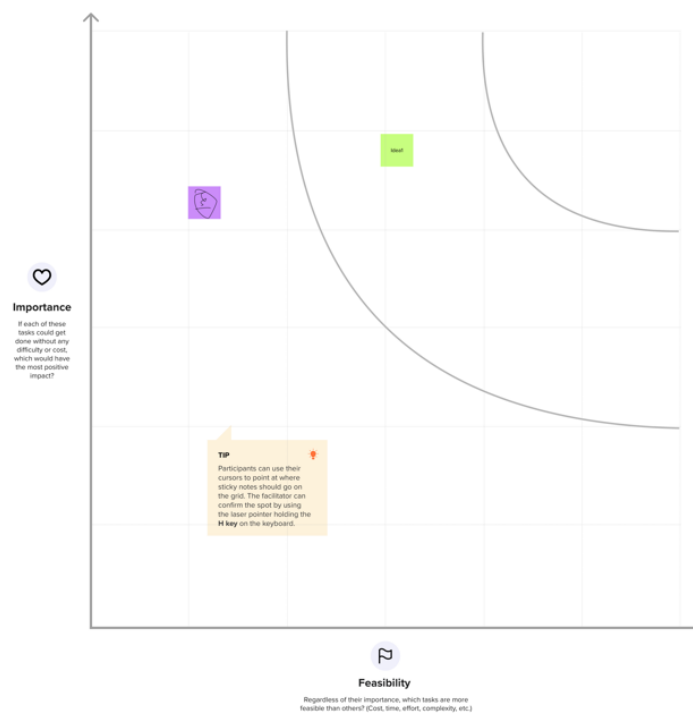

Step-3: Idea Prioritization

4

Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

20 minutes

Step-1: Define the Problem Statement

How Might We: Build a lightweight, high-performance single-page MERN application that eliminates high client-side loading times and separate management interfaces for small-to-medium retail vendors while providing a transparent, resilient checkout framework?

Step-2: Brainstorm, Idea Listing and Grouping

Group 1: Customer Experience & Performance (Frontend Core)

- **Idea 1:** Leverage global Vanilla CSS variables to define spacing, typography, and glassmorphic layouts to bypass heavy, slow utility frameworks.
- **Idea 2:** Synchronize user shopping baskets across catalogue grids and item descriptions using global React Context states.
- **Idea 3:** Implement an itemized real-time invoice calculator within the cart checkout stream to display transparent retail totals, discount reductions, and cash-on-delivery tracking.

Group 2: Administrative Control & Theme Management (Operations Core)

- **Idea 4:** Create a dynamic administrative configuration dashboard to alter active storefront categories and hero landing banner assets on the fly.
- **Idea 5:** Build a dynamic theme injector that detects administrator authentication states and injects an .admin-theme class directly into the document <body> element to instantly remap global UI variables into a high-contrast dark dashboard.
- **Idea 6:** Structure an active order pipeline allowing administrative users to click and toggle order fulfillment lifecycle stages.

Group 3: System Resiliency & Architecture (Backend & Database Core)

- **Idea 7:** Enforce endpoint access security by building server-side Express middleware filters that decode stateless JSON Web Tokens (JWT).
- **Idea 8:** Engineer a custom database interceptor loop (makeModelProxy) to cast incoming string IDs into native ObjectIds and enable an automatic local mock-database fallback proxy pattern if cloud connection timeouts occur.
- **Idea 9:** Deploy regular expression query parsers on the backend server to match user search strings across product titles and descriptions instantly.

Step-3: Idea Prioritization

High Importance / High Feasibility (Do Now)

- **Optimized Vanilla CSS System:** Drastically cuts down initial page loading speeds on mobile networks and is highly straightforward to establish via root style variables.
- **Dynamic Theme Class Injection (.admin-theme):** Prevents UI template duplication and styling leaks with a single, highly efficient client-side document layout override script.
- **Stateless JWT Authorization Guarding:** Absolutely vital for isolating administrative functionalities from standard customer routes via standard Express middleware.

High Importance / Low Feasibility (Plan for Later)

- **Resilient Model Proxy Hook (makeModelProxy):** Critical for bypassing restrictive institutional network blocks, but requires writing complex proxy wrappers to catch query exceptions and seamlessly read/write local filesystem fallbacks.
- **Real-time Cross-Tab Session Synchronization:** Crucial for preventing out-of-sync cart bugs across multiple customer browsing tabs, requiring explicit storage event listeners or localized state synchronization patterns.

Low Importance / High Feasibility (Quick Wins)

- **Dynamic Landing Banner Swapping:** Provides immediate visual proof of administrative control by connecting a simple frontend image reference state to a database-served configuration object.
- **Order Status Life-Cycle Toggles:** Simple administrative dropdown selectors that trigger direct HTTP mutations to update order documents from "order placed" to "in transit".

Low Importance / Low Feasibility (Drop or Re-evaluate)

- **Third-Party Payment Gateway Integration:** While useful, a complete payment terminal setup introduces intensive external merchant validation overhead; keeping the focus on local Cash-on-Delivery (COD) transactions matches the initial project timeline better.
