Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to help teams better understand their users.

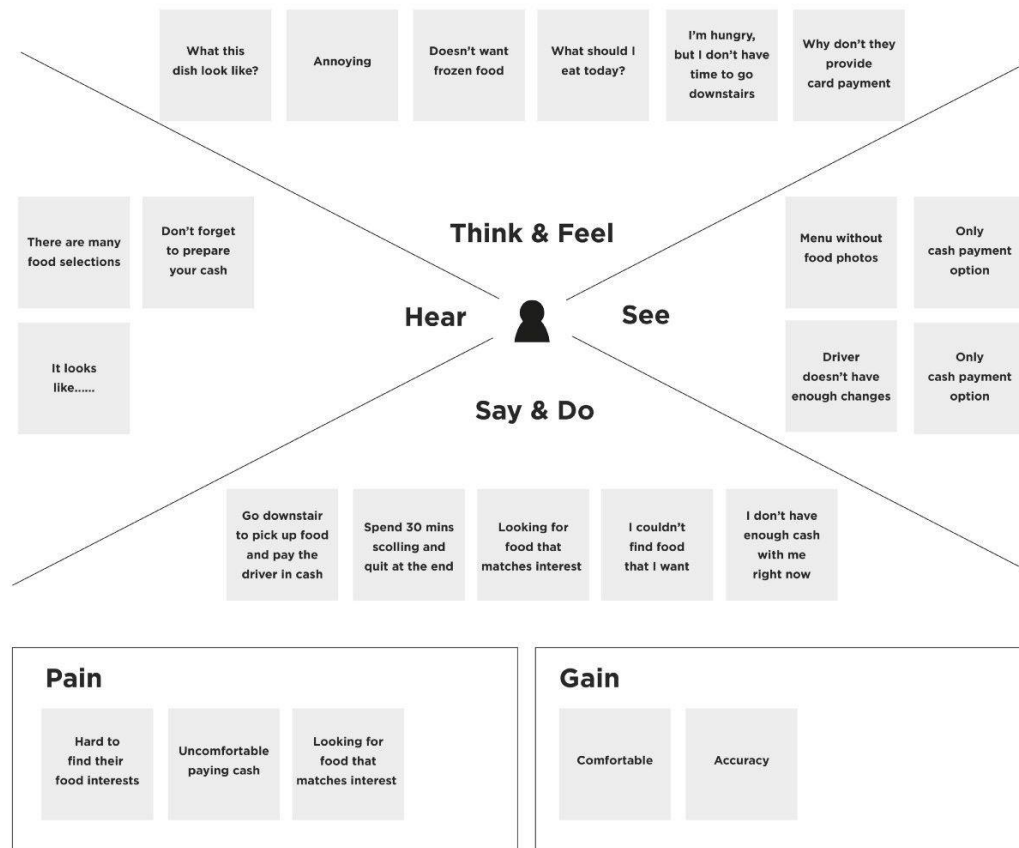

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Example:

Example: Food Ordering & Delivery Application

1. Think & Feel

- *Worries:* Technical glitches or unexpected database connection timeouts might crash the store during peak checkout hours.
- *Aspirations:* Wants a highly professional, smooth online storefront that instantly commands customer trust.
- *Desires:* Full, independent control over what visitors see on the front-page promo banner without having to hire outside help.

2. Hear

- *From peers:* "If your retail shop doesn't have an online presence right now, you don't exist in the modern market."
- *From developers:* "It will cost thousands of dollars in upfront and ongoing maintenance fees to build and run your e-commerce website."
- *From customers:* "Can I browse your full product catalog online somewhere instead of scrolling through messy WhatsApp groups?"

3. Sees

- Direct competitors successfully launching sleek, responsive, interactive web shops.
- Consumers prioritizing buying products directly from their mobile devices while on the go.
- Overwhelmingly cluttered, confusing, multi-tab layout configurations within traditional content management systems.

4. Says & Does

- Manages day-to-day product inventory metrics manually using paper journals or unorganized Excel sheets.
- Takes photos of local stock and manually uploads them to social media pages to attract buyers.
- Processes incoming orders via scattered direct messaging logs, leading to lost client and delivery details.

5. Pains

- High transaction subscription and platform fees that cut deep into thin retail margins.
- Slow mobile page-loading speeds that cause frustrated shoppers to abandon their shopping carts.
- Losing track of order fulfillment stages and shipping statuses during heavy sales seasons.

6. Gains

- An uncluttered interface that allows setting up a new product SKU in under 30 seconds.
- Instant visual status tracking widgets to monitor total users, active orders, and catalog counts from one dashboard.
- Automatic, mathematically transparent checkout invoices that show clear retail pricing and active discount logic.
